Your travel tech setup

Set things up at home, where recovering a login is merely annoying. Test what you need before relying on it overseas.

Devices and power

- ☐ My phone, charger, adapter and essential equipment are tested.
- ☐ I checked SIM / eSIM compatibility, unlock status and activation timing.
- ☐ I checked my carrier’s battery and power-bank rules.
- ☐ I have a practical backup if the main device fails.

Accounts and recovery

- ☐ Strong device lock and automatic locking are enabled.
- ☐ Password manager and two-factor authentication work.
- ☐ Recovery codes are stored securely, separately from the main device.
- ☐ I can access important accounts if the phone is unavailable.
- ☐ Official remote-lock tools are enabled where supported.

Offline essentials

- ☐ Tickets, accommodation addresses and insurance assistance.
- ☐ Relevant map areas and translation resources, tested offline.
- ☐ Important contacts and a separate recovery route.
- ☐ A tested photo and document backup plan.

My recovery record

Record locations and procedures here, not passwords, security codes or full card details.

What I need	Where / how to recover	Tested

The airplane-mode test

Switch off the connection and open your bookings, address, map and essential documents. Then ask a harder question: could you recover them without this phone? Fix any gap before departure.

What I still need to sort out
